Part de Deux

A VANILLIN ALTERNATIVE FLAVOR SOLUTION FOR PETITE FOUR

15,000 tonnes of vanillin are used in baking and cooking each year to give dishes that well-known and loved sweet and well-balanced vanilla taste. The flavor is, however, not all that easy to come by, especially not with the current growing demand. There are few suppliers, the prices for the raw materials and the availability of the end product are fluctuating – an alternative is needed. We have developed a comparable solution that fulfills all of the customer's wishes and is available at competitive prices.
