ICE TEA DRINKS WITH REDUCED SUGAR CONTENT

Iced tea is one of the most popular drinks on a hot summer day – and it has a huge amount of sugar in it. This makes it less enjoyable for many people, especially since more and more consumers want to enjoy drinks that not only taste great but also make them feel good.

They want healthier, tastier and authentic beverages. And they want less sugar. We have developed two iced tea recipe options that use natural Symlife® flavors:

- Natural Symlife® flavor reduces sweetness by 9 g/liter.
- The combination of E960 (steviol glucosides) and natural Symlife® flavor reduces sweetness by 25 g/liter, which falls within the required range for declaring a product low in calories and low in sugar (less than 20 kcal per 100 ml).
